

At the May 27, 1982 Toxic Substance Control Commission Meeting the Commission unanimously passed the following motion regarding the Southeast Oakland County Incinerator Authority Landfill (SOCIA).

1. Ask SOCIA management to explain the presence of pumps and hoses that lead to the gully which empties into Honeywell Stream.
2. Ask DNR to set up a monitoring plan to prevent (a) pumping of leachate into Honeywell Stream and (b) dumping of industrial wastes at the site.
3. Ask DNR to monitor any changes at the site to assure a reduction of odor.
4. If the revised compliance program proves inadequate to reduce odors, require installation of an exhaust and ventilation system.
5. Require buildup of the Mason Farm on Dequindre Road to prevent further leachate flow into Honeywell Stream.
6. Request records on chemical evaluation of liquids from monitoring wells.
7. Request analysis of leachate being generated now.
8. Request permeability data of final cover on cell one. Does it meet Act 641 requirements?
9. Request ambient air quality monitoring as in the May 18, 1982 proposed compliance schedule.
